Mr. Torres, I would like to urge you to seriously consider our plight. We are endanger of losing our clean water in areas where a private well is necessary. My home is about 2 1/2 miles from the proposed site for these injection wells where they want to inject toxic waste into ground where old (some up to 70 year old and some locations not even known) oil wells once were. Even under the best of circumstances this is not a good idea considering the high number of population close by.

Once our underground water supply has been contaminated, there will be no going back to clean water as before. This contamination will affect up to 54 counties in our state and untold population.
